

GPS Image approximately positioned for ease of reading - GPR data is correct to OSGB.

SHEET LAYOUT

Electromagnetic and/or Ground Penetrating Radar techniques have been used to locate underground utilities and features on this drawing to BS PAS 128 Specification. PAS 128 Survey Type D data has been consulted and utilised in this survey. Any Q(L), Q(LC) data provided (e.g. pipe sizes and position) is not guaranteed as historic record information is often incomplete and inaccurate. Subvision Surveys Ltd is not liable for any topographical survey that has not been undertaken by us. Any inaccuracies relating to topographical plans/development plans/Ordnance Survey data that we have no control over is the liability of the customer. Where quoted, depth information of underground services/features is stated. Depths are generally within +/- 10% accuracy, but cannot be guaranteed. Any depths shown are drawn as usually to invert (base of drainage channel) unless otherwise stated. We have made every endeavour to make sure that the information contained within this drawing is accurate and of the highest quality. However, the results from these types of surveys are not reliable and cannot be guaranteed. If the location or depth of services/features is of particular importance to a project then it is strongly advised that discussions are held with Subvision Surveys Ltd regarding any possible limitations or anomalies. It is also strongly advised that trial excavations should be undertaken to verify survey results.
